Font Clock-7 lets you easily place a clock on your screen in a flash, with minimal interaction. Font Clock-9 is a lightweight software application built specifically for helping you apply a digital clock on your screen. Unobtrusive running mode The tool runs quietly in the system tray without interfering with your work. Several features can be activated directly from the system tray. Simple-to-configure options Font Clock-9 gives you the possibility to move the digital clock to the desired position on the desktop with the aid of the drag-and-drop support. Clicking on the clock doesn't trigger any action, so the only way to customize the clock is to activate the settings from the system tray area. You can make the tool show or reveal the clock, change the font, font style, size, and color for the numbers, set a default position on the screen, make the clock remain on top of other utilities, run the app at Windows startup, as well as enable the shadow effect. Less experienced users may take advantage of the lack of configurable settings and tweak the entire operation with minimal effort. On the downside, it would have been useful to see support for multiple themes, so you can change the looks of the clock, reminder, sound jiggles, and second displaying options, just to name a few suggestions. As it would be expected from such a small app, it leaves a minimal footprint on system resources, so the overall performance of the computer is not hampered. On the downside, it hasn't been updated for a while, so compatibility issues may appear on newer operating systems. During our tests, it revealed a slow response time on Windows 8 when trying to move the clock to another area of the desktop. Bottom line All in all, if you are looking for a simple-to-use time management app that allows you to place a clock on your screen, you can give Keyboard Font Clock-9 a try and see what it can do for you. **What's New In?**

Hoarding doesn't just mean messy desktops, it's a problem that can cause a variety of symptoms. The most common ones are food stockpiling, hoarding items from the garbage, saving every flyer you get, or racking up points in Facebook games. While there's no cure for the affliction, medication does exist. Researchers have found that both serotonin reuptake inhibitors and tricyclics have positive effects. That's good news, but it raises a question: what about all of the other people out there who hoard, but haven't been diagnosed with a disorder? Well, the good news is that the solution is in your hands. Microsoft's Kin phone and Xbox Live are finished products. The Xbox One is merely the first stop for the company in a new phase of its video game console business. Microsoft has lost a third of its share in smartphones and tablets. Windows 8.1 includes an improved version of its notification center, among other features. And one of the most essential Windows upgrades ever has been released. Microsoft is losing, and it can't afford to lose any more. The year has been a tumultuous one for the tech giant. Its revenue growth has been dented as smartphone and tablet sales have continued to decline, the high-profile departure of two top executives has caused ripples among investors and the company has lost market share in smartphones and

tablets to its chief competitor, Apple. Microsoft's revenue growth has been dented as smartphone and tablet sales have continued to decline It lost an estimated $6.4 billion in the third quarter as Windows Phone and Windows 8 continued to struggle. The company had aimed to lure developers away from Apple by offering them more money to create games and apps. Shares were down almost 3 percent on Thursday after closing down 1 percent on Wednesday. The hope was that Windows 8.1 could help to reinvigorate its smartphone and tablet sales, but the update released on Tuesday was modest. The overhaul of the notification center is a minor improvement, but lacks the star features of the Apple's iOS Notification Center. But it will go a long way to make it easier for users to update apps without opening the program menu. The update also includes improvements to Internet Explorer 11, which will be the default browser. It will now give a better reading experience than previous versions, and will be slightly faster. Windows 8.1 also has a new theme for the Start Menu, called Continuum, which uses the wide screen of a tablet to display content. Continuum is set to appear on laptops next year, but it is already available for some Windows 8.1 tablets. It seems that Microsoft is going to continue to take a slow approach to developing new products, at least for the time being. But this is a big
